Building Envelope

Dow Building Solutions is a leader in delivering insulation, air sealing and weatherization technologies that help improve the energy efficiency and sustainability of residential and commercial buildings around the globe. For more than 60 years, Dow has leveraged the power of chemistry to create solutions that help building owners maximize energy efficiency, improve comfort and durability, and save money.

Rodenhouse Inc., founded in 1993, manufactures innovative fastening systems for exterior building envelopes and facades. Our first fasteners focused on mechanically attached insulation found in EIFS or one coat polymer modified stucco systems. Other fasteners include washers for wire & stucco lath attachments, foam core tile backer board, and plaster repair.

R-Guard air barrier systems stop air leakage. Controlling the leakage of air and water is fundamental to designing an energy efficient building. Performance tested and proven to withstand extreme weather conditions, R-Guard protected buildings are more durable, resilient and sustainable. through wall structures, rough openings, sheathing seams, and material transitions making your building air tight. And an air tight building is an energy efficient building. That's why buildings that meet the world's toughest energy efficiency requirements use R-Guard. The Bullitt Center, considered the world's greenest commercial building, selected R-Guard for it's air and water barrier system.

The **DensElement Barrier System**, completely eliminate an additional water-resistive and air barrier (WRB-AB) over the face of the sheathing. No building wrap, fluid-applied membranes or peel-and-stick membranes required. No re-tooling or re-training. It's a process you already know and a change that makes sense. Save time, labor and materials.

Mortar Net Solutions™, formerly Mortar Net® USA, Ltd. develops, distributes and supports innovative moisture management solutions for masonry construction. In addition to the patented mortar collection device, MortarNet®, Mortar Net has developed new proprietary solutions for masonry construction that include TotalFlash®, BlockFlash®, BlockNet®, HouseNet®, WallNet™, WeepVent™, CellVent™, and LathNet™. Mortar Net Solutions is also one of five partner companies which are developing and marketing the CavityComplete line of wall systems. The company constantly seeks to identify opportunities to add to its product offering by creating new solutions that enhance the durability and beauty of masonry construction.

American Hydrotech, Inc.®, is a recognized leader in the development, production and distribution of premium waterproofing and roofing products. Headquartered in Chicago, Illinois, the company was founded in 1977 after acquiring the United States distribution rights for Monolithic Membrane 6125®, a unique waterproofing membrane developed in the early 1960's by Uniroyal Ltd. The membrane has been installed worldwide on over 2 billion square feet of roof decks, plazas, vertical foundations, reflecting pools and other structures in over 45 countries.

The original brand of pre-compressed joint sealants, constantly raises industry standards while continuing to expand around the globe. **Willseal** products have been specified and successfully installed on thousands of construction projects worldwide. Willseal is committed to bringing intelligent solutions to our customers by utilizing technology-driven designs to create superior sealant systems.

Bullet Tools is a U.S. manufacturing company recognized as the pioneer and world's leading authority of fixed-blade cutting tools for the construction industry and has earned a global reputation for the EZ and Magnum dust-free installation tools that improve efficiency, accuracy and safety in the flooring, siding and insulation categories. Dust free cutting tools, specifically for Rigid and Batt Insulation.

Specialty Flooring/ Corrosion Resistant Systems

Corrosion Engineering, a division of **ErgonArmor**, manufactures a broad range of nonmetallic linings and materials to protect industrial infrastructure and equipment against corrosion. ErgonArmor, one of several Ergon, Inc. enterprises, is home to its Blackhawk, Novocoat, Ertech, and Corrosion Engineering divisions, which manufacture technologies for corrosion protection, moisture infiltration, adhesion, sound dampening, and surface treatment.

Concrete Chemicals :

Founded in 1987, **RJD Industries** is a manufacturer and distributor of specialized products for the concrete construction industry. Our product lines are designed to eliminate introduction of corrosion into concrete structures and provide additional cost savings by dramatically reducing the amount of manhours necessary to complete the job when compared to traditional methodologies.

Waterstop plays a critical role in the integrity of concrete structures. It provides a fluid-tight diaphragm when embedded in, and running through concrete joints. Earth Shield Thermoplastic Vulcanizate Waterstop (TPE / TPER / TPV), by JP Specialties greatly expands the scope of conventional waterstop by offering unmatched chemical resistance to a broad spectrum of aggressive chemicals, solvents, and hot petroleum oils. Manufactured **NSF Certified, EPA-compliant** (RCRA, SPCC, CFR 265.193, CFR 112) waterstop profiles are available for new construction and retrofit, as well as the necessary tools and accessories for proper installation.

SureBuilt provides premium products for commercial and government contractors, pre-casters and tilt-up engineers, rebar specialists and other constructions professionals. Our product lines consist of professional forming systems, products and accessories, scaffolding and shoring products, precast and tilt-up products, reinforcement, architectural formliners, egress window system and more.

Right Pointe provides concrete and road construction professionals with the industry's top concrete and asphalt maintenance products. With over 80 years combined team experience in providing quality construction solutions, Right Pointe's group of proven industry veterans provide the experience, service and expertise to make your next project a success

**** Also Available**** Anti Graffiti Coatings and Removers

Heavy and Highway

Phoscrete is a MALP CONCRETE that tenaciously bonds to concrete (both chemically and mechanically), sets fast (even in cold weather), and is traffic ready one hour after initial set. **Phoscrete Concretes chemically bond both to itself and to existing substrates.** During the exothermic reaction between our Dry Aggregate (technical grade magnesium-alumina) and the Liquid Activator, ionic-bonding occurs to form alkali earth metal-oxide phosphates. This high-strength chemically-bonded compound insures both coherence and adherence and is therefore extremely durable in high stress environments. **Both Cementitious and Polymeric Properties:** The Phoscrete Bond is rapid-setting with high-early strengths, but it is not brittle like other cementitious bonded materials. Due to the formation of chain and ring structures that are similar to polymers, after curing the Phoscrete Bond remains flexible.

Aquaphalt is a revolutionary, high performance, flexible, reactive cold mix asphalt repair product for use in repairing asphalt and concrete road surfaces. Aquaphalt reacts with plain water to provide a permanent repair solution. Free of solvents or VOC's.

Precastee is a stay in place soffit and fascia forming system. A new method of bridge forming.

**** Also Available **** Loose Dowels, Dowel Baskets, and Paving Forms and accessories. A wide range of fast setting and Low P specialty cements (both bags and bulk).
